PRODUCT DESCRIPTION

The Stelled Illuminated Bollard has a more stylish appearance than many other commercial style bollards, made from 3mm thick marine grade stainless steel which has been polished by hand. This makes it ideal for use in more homely areas such as garden seating areas and driveways, as well amenity lighting for larger, commercial or public areas, including car parks, lakes, golf courses etc, where a high level of light is required.

A specially designed head allows extra room for a large 20W LED corn bulb with an incredibly high lumen output (brightness), which is supplied as standard with each bollard, ideal for use with most PIR and Photocell systems.

SPECIFICATIONS

Length	800mm
Diameter	210mm
Fixing	Surface Mounted
