3Sixty Reflective Self-Righting Bollard

3SIXTY REFLECTIVE SELF-RIGHTING BOLLARD

Product Code: 3Sixty Reflective Self-Righting Bollard

Dots

PRODUCT DESCRIPTION

Designed by experts in the plastic and rubber industry with over ten years of experience in reflective bollards, the 3Sixty is the pinnacle of reflective, self-righting bollard technology.

3Sixty by name, 3Sixty by nature. This bollard absorbs impacts from any direction, always returning to its correct orientation. There are no springs or moving parts, just an impact and weather resistant synthetic rubber. In addition, its internally moulded reinforcement struts ensure that the bollard shell does not compress meaning no cracking and no creasing of the rigid reflective material.

The fluorescent yellow reflective material provides high visibility night AND day, with angled side reflectors for additional visibility from the front and rear - ideal for vehicles turning into junctions which ordinarily would not catch the reflective panels on a bollard. Rear reflective panels are standard with the 3Sixty at no extra cost. These rear panels are designed for visibility either side of a centre island column to avoid unnecessary wastage.

The 3Sixty's ultra low profile base is designed to miss low ground clearance vehicles - often the cause of premature failure. Installation is quick and easy, either via connection to a foundation cage or for quick replacement, to a NAL socket. In addition, the supplied base plate can be retrofitted to redundant baselight housings and will fit directly on to a number of current reflective bollard footprints. Please note, NAL adaptor plates are required for all NAL socket compatibility. These are available for purchase if required.

SPECIFICATIONS

Width	370mm
Depth	84.31mm
Height	960mm
Fixing	Surface Mounted
Material	Plastic
Colour	Galvanised
