PRODUCT DESCRIPTION

The Cone Photocell LED Bollard is a high output, reliable commercial bollard with an in-built LED. An internal colour switch controls 3 different colour temperatures: 3000K, 4200K, 6500K.

The in-built LED (rated 20W) generates 1600lm (80lm/W). The flat top head design houses an internal, coned, white reflector for optimum light output. This is surrounded by a clear, polycarbonate diffuser for even light dispersal and further protection.

The Cone Photocell LED Bollard is made from heavy duty, pressure die-cast aluminium with non-corrosive, stainless steel socket screws. Rated IP65 and with an impact rating of IK08 for the lens, and IK10 for the tube, this bollard is ideal for all applications, such as car parks, driveways, pathways, seating areas etc.

Supplied with a 5 year Guarantee.
